### (54) PRODUCTION OF TAXANE-TYPE DITERPENE

(57) Abstract:

**PURPOSE:** To provide a method for easily producing taxane-type diterpenes used for therapeutic agents, etc., for ovary cancer, breast cancer, lung cancer, etc., by tissue culturing the cultured cell or cultured tissue of a plant producing a taxane-type diterpene in a medium containing cyclic polysaccharides, and recovering the products from the cultured substances.

**CONSTITUTION:** This method for producing a taxane-type diterpene comprises tissue culturing the cultured cell and/or cultured tissue of a plant (e.g. *Taxus brevifolia* NUTT) producing the taxane-type diterpene (e.g. Taxol) in a culture medium containing cyclic polysaccharides (e.g.  $\alpha$ -cyclodextrin) in the presence of a jasmonic acid expressed by the formula {R0 is a group of the formula (CH<sub>2</sub>)<sub>n</sub>COR<sup>7</sup> [R<sup>7</sup> is hydroxy, OM (M is an alkali metal atom, an alkaline earth metal atom or NH<sub>4</sub>), an alkoxy, etc.; (n) is an integer of 1-7]; R<sup>1a</sup>-R<sup>1f</sup> are each H, OH, a 1-6C alkyl or a 1-6C alkoxy; R<sup>2</sup> to R<sup>5</sup> and R<sup>6a</sup> are each H or a 1-6C alkyl; R<sup>6b</sup> is OH, -O-carbohydrate residue, etc.}

and recovering the products from the tissue cultured substance to obtain the taxane-type diterpene used for the therapeutic agents, etc., for the ovary cancer, breast cancer, lung cancer, etc.
